

**APPARATUS FOR ACCESSING
A COMPUTER-READABLE MEDIUM**

Abstract of the Disclosure

A computer-readable medium device includes apparatus and a computer-readable medium. To a computing device, according to a predetermined command set behavior of the computer-readable medium device, the apparatus outputs a description of first and second features of the computer-readable medium device. The first feature is other than an
5 identification of the computer-readable medium device. The second feature is an indication of whether the computer-readable medium device executes a predetermined write strategy. From the computing device, the apparatus receives a signal. In response to the signal, the apparatus accesses the computer-readable medium, according to the first and second features.
